

## On the Subject of Turtle Robot

*It's a bit old and buggy, but it works.*

An old terminal computer contains drawing instructions for a Turtle robot

([https://en.wikipedia.org/wiki/Turtle\\_\(robot\)](https://en.wikipedia.org/wiki/Turtle_(robot))). For example:

- **FD 4** — Move 4 steps forward.
- **LT 90** — Rotate 90 degrees left.
- **RT 90 2** — Move in a curve, making 90 degrees of a circle with radius 2.

Following the instructions you'll get one of the drawings below. It can be rotated, mirrored and/or scaled. The code contains three bugs. Use the arrow keys to scroll through the source code. Comment out the bugs using the '#' key. If you try to comment out a command that isn't a bug, you'll get a strike. If you found all bugs, the module will be solved.
